

## ScanTech Offshore announces new Well Test Support Engineer

ScanTech Offshore is pleased to welcome Mark Ball to the team. As Well Test Support Engineer, Mark will be key to enriching ScanTech's strength, depth of knowledge and understanding of the well test process.

With a wealth of experience in the well testing sector, Mark is set to bolster the engineering department, ensuring all future products (including the introduction of heat exchangers) are specified best in class and specifically support all current and upcoming well test projects.

Mark has an extensive history with well test providers Halliburton and Expro, where he contributed in roles ranging from senior project management to well test support managing and technical advisory services. Mark's portfolio of specialised expertise will significantly add value to ScanTech and its clients, through improving application of services and maintaining our high standards of compliance with industry codes. The role will also enhance ScanTech's understanding of well test & process design, and through increased presence at HAZOP & HAZID events, heighten our on-going efforts in contributing to the well test safety culture through outstanding services in equipment reliability and provision of the best people.

Shaun Ryan, Managing Director said "we extend a warm welcome to Mark and look forward to him contributing positively to the excellent service we provide our customers".
